Skills

Languages HTML, CSS, JavaScript
library Reactjs, IDE vs code, React-router, Redux-toolkit
Framework Tailwind CSS

Projects

Authentication-Form

- A form to take user credentials
- I learned about form validation with this project by using JavaScript and regex.
- when credentials don't match validation value then validation shows the error message.
- If validation failed user cannot move forward
- validation using regex for user credential
- configured routing between login/ sign-up page.
- <https://divyasaroj929.github.io/sign-up-Form/>

Wizard

- A form to take user credential
- I learned about how to handle multiple data and step-by-step interface to assist users in completing specific tasks, simplifying complex work-flows
- if you click the next button then the progress bar shows you have completed this step of the form
- progress bar show total count of page to current page number
- <https://divyasaroj929.github.io/MultipleStep-Form/>

Myntra-clone

- Myntra hold navbar which contains all data inside.
- we use react-router on different pages like. man, women, etc
- use conditional rendering to switch between kinds of the navigation bar
- we have a dropdown in the navigation bar
- <https://divyasaroj929.github.io/myntra/>

WeatherApp

- we used weather open API and access some data in our project
- I learned about form how to fetch API and use of API. concept of debouncing
- we used animation for style
- we add a debouncing method to not allow unwanted function calls in our project
- our search function is smooth running
- we have to show current date
- <https://divyasaroj929.github.io/Weatherapp/>

Cell-Component

- I learned about position of cell-component
- we use react-router for the navigation item
- we have a sidebar that also holds navigation item
- we hold different types of data for both navigation items inside. we fix this content based on showing the sidebar slider when the slider is open we use different styles and when the slider is off than we use a different style
- <https://divyasaroj929.github.io/cell-component-fix/>

SearchApi

- we used open API for the project
- we used debouncing method in the search function
- Debouncing is used for optimizing the performance of a web app
- <https://divyasaroj929.github.io/SearchFunction/>

Education

Pt. Ravishankar Shukla University

BACHELOR OF ARTS

May 2021
